

## QUIZ 11 LASW

*CCSS.ELA-Literacy.RI.5.2 Determine two or more main ideas of a text and explain how they are supported by key details; summarize the text.*

*Explain how scientists finally answered the question of whether or not there is water on the moon. Use at least **two** details from the text to support your response.*

Scholar Name	Scholar Sample	Gap
Veronica Moya	Scientists figured out that there was water on the moon. Scientists wondered if there was water on the moon for years because of how cold it was. After several years astronaut Lunar went up to the moon in 2009. In the text it says, "Yes we found water, 'LCROSS' scientists Anthony Caprete told reports. Yes we did find not a little it of water." By saying not just a little bit it shows that they found lots of water on the moon. In the text it also says, "The mystery of the water on the moon would take years to find." This shows that they thought it would take forever to figure the	
Chyanne Perez	Scientists finally answered the question whether or not there is water on the moon, the answer is yes there water on the moon. In the text it says they found enough to fill a dozen two-gallon buckets. This means that there was a lot of water in space. In the text it says, moon water mystery it created another one. Scientists haven't been able to identify some of the materials kicked up in the debris cloud yet. This means there were water in space and there were something else in space.	
Akil Chambers	The scientists found out there was water on the moon. They did that by sending a robot in a space shot so they can see if there was water on the moon. That means if they were to build a	
Zaria Clement	Scientists finally explained that there is water on the moon because both space probes detected tiny water crystals in one of the moon craters.	
Michael Vincent	Scientists finally answred the question of whether or not there is water on the moon. For example, "that the moon doesn't have water." This shows why they finally answers because	
Kenneth Cockrell	Scientists finally answered the question by using drones first. In paragraph 6, it says, "only minutes later LCROSS slammed itself into the crater too, as astronomers on earth searched they kicked up cloud for water and found it." This shows that scientists used drones first because LCROSS is a drone. In paragraph 7m it said that they found enough water to fill up a dozen two gallon buckets with LCROSS. This shows that scientists used drones first because the LCROSS is a drone.
